Professional Summary

I am a Staff Product Designer with 20+ years of experience leading design for complex digital products — from international consultancy at Keyrus (Honda, SulAmérica Health & Insurance, TIM, GPA) to a strategic position at Grupo Boticário, one of the largest beauty ecosystems in the world with operations in more than 40 countries.

My work is guided by three pillars:

- UX Strategy & Product Discovery: I translate data and behaviors into design decisions with measurable impact
- Design Systems at Scale: I built a system adopted by approximately 130 products/year, following WCAG and brand guidelines
- AI-Driven Design: I apply artificial intelligence to accelerate discovery and research, create conversational experiences, prototyping and MVPs

Differentiators I bring to every project:

- Real-world experience in data, insurance, financial products, manufacturing, B2B and B2C — I led UX for SulAmérica's corporate health and insurance platform (claims visualization, fraud detection, reimbursement journeys and authorization), and at Grupo Boticário I led products for the corporate financial products platform
- Cross-functional leadership — I act as a bridge between C-levels, stakeholders, Product and Engineering, translating business requirements into viable solutions
- Sharp Analytical Thinking — I connect qualitative and quantitative data to make evidence-based design decisions
- Adaptive Resilience — I navigate high-complexity environments, shifting priorities and diverse stakeholders without losing focus on value delivery

Professional Experience

Product Design Consultant — AI & Ecosystem Products

Independent Consultant | Jan 2025 – Present

- Leadership of new product initiatives (0→1) using AI to accelerate discovery and hypothesis validation
- Design of conversational experiences, AI agents and LLM-assisted interfaces
- Rapid prototyping, MVP development and experimentation applied to digital ecosystems
- Strategic consulting in UX Strategy and Design Systems for companies undergoing digital transformation

Product Design Specialist — Data Products

Grupo Boticário (Beauty Ecosystem — 40+ Countries) | May 2021 – Dec 2024

- Product leadership (Lyra): end-to-end design of the corporate Data & AI platform for cosmetics R&D — from discovery to handoff. Results: 62% reduction in analysis time, R\$ 7M+ in savings, 8,500+ accesses in three months
- Design System: built and implemented for data visualization, applied to approximately 130 digital products per year, following WCAG accessibility guidelines and brand identity
- Financial Products: led products for Grupo Boticário's corporate financial products platform
- Stakeholder management: presentation of design strategies to VPs and the Executive Board; weekly alignments with Analytics Engineering
- Design + Data Culture: leadership of workshops and training that impacted 1,000+ professionals in Data Storytelling and UX Analytics
- Product Discovery: structuring of research, validation and experimentation processes for the analytics product portfolio at organizational scale
- Cross-functional leadership: management of collaboration between Product, Engineering, Data Science and Business in a triad model (Product + Tech + Design)

Data Product Designer | Product Design Lead

Keyrus (International Technology and Data Consultancy) | Jul 2017 – Apr 2021

- Strategic designer for data visualization products, from discovery to delivery, for major national and international clients
- Product Discovery with business stakeholders: needs mapping, product vision definition and technical feasibility assessment
- Creation and management of scalable Design System for analytics interfaces, reducing development time and increasing consistency
- Focal point between executive stakeholders and technical teams, translating complex requirements into viable solutions aligned with business objectives
- Definition of KPIs and success metrics to measure product impact and guide evolution

Key projects:

- SulAmérica Health & Insurance: Led UX for corporate health and insurance platform — claims visualization, fraud detection, reimbursement journeys, provider authorization and cost-reduction actions. Deep immersion in the vocabulary and regulation of the insurance market
- Honda: Creation of analytics dashboards for tracking industrial and commercial performance in factories and dealerships

UI/UX Designer — Data & Analytics

QConsulting | Nov 2014 – Jul 2017

- Interface design for BI platforms and analytics dashboards
- Prototyping, information architecture and technical implementation support

Education

- Postgraduate — People & Business Management | Escola Conquer / ESIC | 2024
- MBA — Corporate & Institutional Communication | UNIP | 2014
- Digital Communication — Photography | UNIP | 2005

Core Competencies

AI-Driven Design | Product Discovery & Experimentation | UX Strategy | Design Systems at Scale | Stakeholder Management (C-level) | Cross-functional Leadership | Data Visualization | Rapid Prototyping | Human-AI Interaction | Financial Products UX | Insurance Products UX | B2B & B2C Design | Usability Testing

Tools & Technologies

AI & Automation: ChatGPT | Claude | Gemini | Midjourney | Figma AI | AI Agents | Prompt Engineering
